

RWTH AACHEN
UNIVERSITY

Computer Vision – Lecture 1

Introduction

09.04.2019

Bastian Leibe
Visual Computing Institute
RWTH Aachen University
<http://www.vision.rwth-aachen.de/>
leibe@vision.rwth-aachen.de

Computer Vision Summer'19

RWTH AACHEN
UNIVERSITY

Organization

- Lecturer
 - Prof. Bastian Leibe (leibe@vision.rwth-aachen.de)
- Teaching Assistants
 - Istvan Sarandi (sarandi@vision.rwth-aachen.de)
 - Dan Jia (jia@vision.rwth-aachen.de)
- Course webpage
 - <http://www.vision.rwth-aachen.de/courses/>
→ Computer Vision
 - Slides will be made available on the webpage
 - There is also a moodle electronic repository
- Please subscribe to the lecture on RWTH Online!
 - Important to get email announcements and moodle access!

B. Leibe

RWTH AACHEN
UNIVERSITY

Language

- Official course language will be English
 - If at least one English-speaking student is present.
 - If not... you can choose.
- However...
 - Please tell me when I'm talking too fast or when I should repeat something in German for better understanding!
 - You may at any time ask questions in German!
 - You may turn in your exercises in German.
 - You may answer exam questions in German.

B. Leibe

RWTH AACHEN
UNIVERSITY

Organization

- Structure: 3V (lecture) + 1Ü (exercises)
 - 6 EECS credits
 - Part of the area "Applied Computer Science"
- Place & Time
 - Lecture: Mon 10:30 – 12:00 TEMP2
 - Lecture/Exercises: Tue 14:30 – 16:00 H03
- Exam
 - Written exam
 - Dates will be communicated soon

B. Leibe

RWTH AACHEN
UNIVERSITY

Exercises and Demos

- Exercises
 - Typically 1 exercise sheet every 2 weeks (numpy/TensorFlow)
 - Hands-on experience with the algorithms from the lecture.
 - Send in your solutions the night before the exercise class.
 - No admission requirement to qualify for the exam this year!
- Teams are encouraged!
 - You can form teams of up to 3 people for the exercises.
 - Each team should only turn in one solution.
 - But list the names of all team members in the submission.

B. Leibe

RWTH AACHEN
UNIVERSITY

Course Webpage

Course Schedule

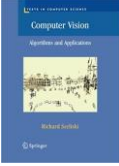

Date	Title	Content	Material
Mon, 2019-04-01	--	no class (RWTH DIES)	
Tue, 2019-04-02	--	no class (RWTH DIES)	
Mon, 2019-04-08	--	no class	
Tue, 2019-04-09	Introduction	Why vision? Applications, Challenges, Image Formation	
Mon, 2019-04-15	Image Processing I	Linear Filters, Gaussian Smoothing, Multi-scale Representations	
Tue, 2019-04-16	TBD	TBD	
Mon, 2019-04-22	--	no class (Easter Monday)	
Tue, 2019-04-23	Image Processing II	Image Derivatives, Edge detection, Canny	
Mon, 2019-04-29	Structure Extraction	Line Fitting, Hough Transform, Gen. Hough Transform	
Tue, 2019-04-30	Segmentation I	Segmentation as Clustering, k-means, EM, Mean-Shift Segmentation	
Mon, 2019-05-06	Exercise 1	Derivatives, Edges, Hough Transform	
Tue, 2019-05-07	Segmentation II	Segmentation as Energy Minimization, Markov Random Fields, Graph Cuts	
Mon, 2019-05-13	Categorization I	Sliding Window-based Object Detection, HOG, SVMs, Viola-Jones detector, AdaBoost	

<http://www.vision.rwth-aachen.de/courses/>

RWTH AACHEN UNIVERSITY

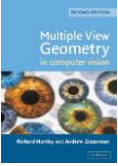

Textbooks

- No single textbook for the class.
- Basic material is covered in the following two books.

R. Szeliski
Computer Vision – Algorithms and Applications
Springer, 2010

(available in the library's "Handapparat")

R. Hartley, A. Zisserman
Multiple View Geometry in Computer Vision
2nd Ed., Cambridge Univ. Press, 2004

- Additional material will be given out for some topics.
 - Tutorials and deeper introductions.
 - Application papers

7

RWTH AACHEN UNIVERSITY

How to Find Us

- Office:
 - UMIC Research Centre
 - Mies-van-der-Rohe-Strasse 15, room 124
- Office hours
 - If you have questions to the lecture, come to us.
 - Send us an email before to confirm a time slot.

Questions are welcome!

8

RWTH AACHEN UNIVERSITY

Topics of Today's Lecture

- What is computer vision?
- What does it mean to see and how do we do it?
- How can we make this computational?

- First Topic: Image Formation
 - Details in Forsyth & Ponce, chapter 1.

9

RWTH AACHEN UNIVERSITY

Why Computer Vision?

Cameras are all around us...

10

RWTH AACHEN UNIVERSITY

Images and video are everywhere...

Personal photo albums

Movies, news, sports

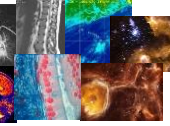

Internet services

Surveillance and security

Mobile and consumer applications

Medical and scientific images

11

RWTH AACHEN UNIVERSITY

What is Computer Vision?

- Goal of Computer Vision
 - Enable a machine to "understand" images and videos
- Automatic understanding
 - Computing properties of the 3D world from visual data (*measurement*)
 - Algorithms and representations to allow a machine to recognize objects, people, scenes, and activities. (*perception and interpretation*)

12

RWTH AACHEN UNIVERSITY

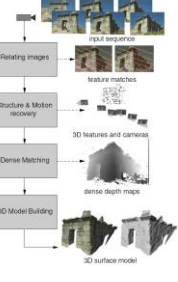

Vision for Measurement

Real-time stereo

Pollefeys et al.

Structure from motion

B. Leibe

Multi-view stereo for community photo collections

Goselle et al.

Slide credit: Svetlana Lazebnik

RWTH AACHEN UNIVERSITY

Vision for Perception, Interpretation

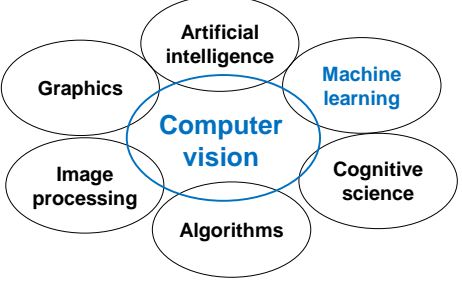

Objects

- Activities
- Scenes
- Locations
- Text / writing
- Faces
- Gestures
- Motions
- Emotions...

Slide credit: Svetlana Lazebnik

RWTH AACHEN UNIVERSITY

Related Disciplines

B. Leibe

RWTH AACHEN UNIVERSITY

Directions to Computer Vision

- Science
 - Foundations of perception. How do WE see?
- Engineering
 - How do we build systems that perceive the world?
- Many applications
 - Medical imaging, surveillance, entertainment, graphics, ...

B. Leibe

RWTH AACHEN UNIVERSITY

Applications: Faces and Digital Cameras

Setting camera focus via face detection

Camera waits for everyone to smile to take a photo [Canon]

Automatic lighting correction based on face detection

Slide credit: Kristen Grauman, Rob Fergus

RWTH AACHEN UNIVERSITY

Segmentation

- Automatic background removal from images
 - Functionality is included in Microsoft Office 2010...

B. Leibe

RWTH AACHEN UNIVERSITY

Matching

- Stitch your photos together to create panoramas

AUTOSTITCH Available on the iPhone App Store

20

RWTH AACHEN UNIVERSITY

Applications: Vision for Mobile Phones

Google Goggles in Action

Click the icons below to see the different ways Google Goggles can be used

- Take photos of objects as queries for visual search

Slide credit: Svetlana Lazebnik

RWTH AACHEN UNIVERSITY

Applications: Vision-based Interfaces

KINECT for XBOX 360

Games (Microsoft Kinect)

Assistive technology systems
Camera Mouse
Boston College

Computer Vision Summer'19

Slide adapted from Kristen Grauman

22

RWTH AACHEN UNIVERSITY

Applications: Medical & Neuroimaging

Image guided surgery
MIT AI Vision Group

fMRI data
Golland et al.

Computer Vision Summer'19

Slide credit: Kristen Grauman

23

RWTH AACHEN UNIVERSITY

Applications: Visual Special Effects

The Matrix

MoCap for *Pirates of the Caribbean*, Industrial Light and Magic
(Source: S. Seitz)

Computer Vision Summer'19

Slide adapted from Svetlana Lazebnik, Kristen Grauman

24

RWTH AACHEN UNIVERSITY

Applications: Safety & Security

Autonomous robots

Driver assistance

Monitoring pools (Poseidon)

Pedestrian detection [MERL, Viola et al.]

Surveillance

Computer Vision Summer'19

Slide credit: Kristen Grauman

25

Computer Vision Summer'19

Ok, Let's Do It – Any Obstacles?

- 1966: Seymour Papert directs an undergraduate student to solve "the problem of computer vision" as a summer project.

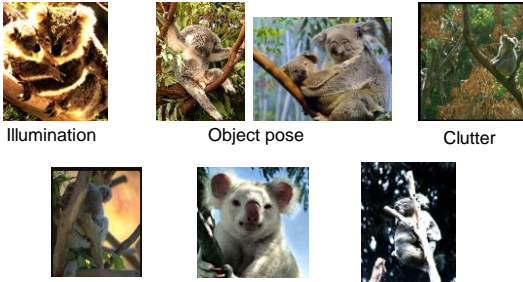

Obviously, computer vision was too difficult for that...

B. Leibe 26

Computer Vision Summer'19

Challenges: Many Nuisance Parameters

- Illumination
- Object pose
- Clutter
- Occlusions
- Intra-class appearance
- Viewpoint

Slide credit: Kristen Grauman B. Leibe 27

Computer Vision Summer'19

Challenges: Intra-Category Variation

Slide credit: Fergus, Felipe, Torralba B. Leibe 28

Computer Vision Summer'19

Challenges: Complexity

- Thousands to millions of pixels in an image
- 3,000-30,000 human recognizable object categories
- 30+ degrees of freedom in the pose of articulated objects (humans)
- Billions of images indexed by Google Image Search
- 18 billion+ prints produced from digital camera images in 2004
- 295.5 million camera phones sold in 2005
- About half of the cerebral cortex in primates is devoted to processing visual information [Felleman and van Essen 1991].

Slide credit: Kristen Grauman B. Leibe 29

Computer Vision Summer'19

So, Should We Give Up?

- NO! Very active research area with exciting progress!

Slide credit: Kristen Grauman B. Leibe 30

Computer Vision Summer'19

Things Are Starting to Work...

Computer Vision in realistic scenarios is becoming feasible!

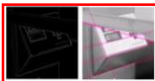

Computer Vision Summer'19

Course Outline

- Image Processing Basics
- Segmentation
- Local Features & Matching
- Object Recognition and Categorization
- 3D Reconstruction

B. Leibe

33

42

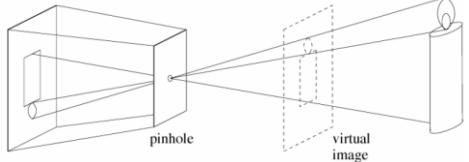

B. Leibe

Adapted from B. Duraiswami

RWTH AACHEN
UNIVERSITY

Pinhole Camera

- (Simple) standard and abstract model today
 - Box with a small hole in it
 - Works in practice

Computer Vision Summer'19

43

B. Leibe

Source: Forsyth & Ponce

RWTH AACHEN
UNIVERSITY

Pinhole Size / Aperture

- Pinhole too big – many directions are averaged, blurring the image
- Pinhole too small – diffraction effects blur the image
- Generally, pinhole cameras are *dark*, because a very small set of rays from a particular point hits the screen.

2 mm 1 mm

0.6mm 0.35 mm

0.15 mm 0.07 mm

Computer Vision Summer'19

44

B. Leibe

Source: Forsyth & Ponce

Computer Vision Summer'19

The Reason for Lenses

- Keep the image in sharp focus while gathering light from a large area

Source: Forsyth & Ponce

B. Leibe

45

Computer Vision Summer'19

The Thin Lens

$$\frac{1}{z'} - \frac{1}{z} = \frac{1}{f}$$

Source: Forsyth & Ponce

B. Leibe

46

Computer Vision Summer'19

Focus and Depth of Field

Thin lens: scene points at distinct depths come in focus at different image planes.
(Real camera lens systems have greater depth of field.)

"circles of confusion"

- Depth of field: distance between image planes where blur is tolerable

Source: Shapiro & Stockman

B. Leibe

47

Computer Vision Summer'19

Focus and Depth of Field

- How does the aperture affect the depth of field?

object image

Flower images from Wikipedia http://en.wikipedia.org/wiki/Depth_of_field

- A smaller aperture increases the range in which the object is approximately in focus

Slide from S. Seitz

48

Computer Vision Summer'19

Application: Depth from (De-)Focus

Images from same point of view, different camera parameters

3D Shape / depth estimates

Slide credit: Kristen Grauman

B. Leibe

files from H. Ili and P. Favelle, 2002

49

Computer Vision Summer'19

Field of View

- Angular measure of the portion of 3D space seen by the camera

Slide credit: Kristen Grauman

B. Leibe

Images from http://en.wikipedia.org/wiki/Angle_of_view

50

Field of View Depends on Focal Length

- As f gets smaller, image becomes more *wide angle*
 - More world points project onto the finite image plane
- As f gets larger, image becomes more *telescopic*
 - Smaller part of the world projects onto the finite image plane

Computer Vision Summer'19

B. Leibe

51

from R. Duraiswami

Digital Images

- Film is replaced by a sensor array
- Current technology: arrays of *charge coupled devices* (CCD)
- Discretize* the image into pixels
- Quantize* light intensities into pixel values.

Computer Vision Summer'19

Image source: Michael Black

B. Leibe

52

Resolution

- Sensor: size of real world scene element that images to a single pixel
- Image: number of pixels
- Influences what analysis is feasible, affects best representation choice

Computer Vision Summer'19

Slide credit: Kristen Grauman

B. Leibe

53

ffios from: Efros et al., Mori et al.

Color Sensing in Digital Cameras

Bayer grid

Estimate missing components from neighboring values (*demosaicing*)
